

Tenant Data Scrambler™

A faster, easier, and cheaper way to protect employee data in testing and support tenants.

Want to increase your control and protection of PII in your non-production tenants?

When production data is used in testing, training, development, implementation and other non-production Workday tenants, sensitive data is accessible to the many people who may work in these tenants.

Scrambling data is the solution, but manual methods are expensive, time-consuming and require exporting the data from the master tenant.

Tenant Data Scrambler (TDS) makes data scrambling easier, faster, cheaper and more effective. Intecrowd, a Workday Partner, developed TDS to deliver:

- Flexible scrambling options – client configurable
- Data Security – PII never leaves Workday servers
- SaaS-based solution
- User/customer interface to set up and initiate scrambling events
- Valid data ranges to support Workday businesses processes

From Intecrowd, a Workday services partner

Intecrowd is a Workday Services Partner with strong expertise in integrations, application management services (AMS), client-side support, and Phase X deployment services. Get the Workday support you need from Intecrowd.

We can help you by:

- Designing and developing payroll, HCM, and Financials integrations
- Planning for and delivering Application Management Services (AMS)
- Providing Phase X support
- Supporting your Workday planning
- Supplementing your current resources
- Providing ongoing integration maintenance
