

# Intecrowd Solutions Profile

Intecrowd is a Workday Services Partner with strong expertise in integrations, application management services (AMS), client-side support, and Phase X deployment services.

## Service Offerings

### Integration Development and Maintenance

Founded on our integration expertise, our integration architects and consultants design and develop some of the most technically challenging integrations on the largest projects worldwide. Whether leveraging a CCB or custom developing a Studio integration, our consultants regularly develop the most complex integrations in the Workday ecosystem.

### Application Management Services (AMS)

You're live on Workday. Now what? Intecrowd's Application Management Services are designed to support your ongoing support needs at your pace of business. Our experienced team of consultants work with you to continue to optimize your investment with functional expertise across the Workday platform, integration updates and tenant management, and release updates to keep your tenant running smoothly.

### Phase X

As your business evolves, so do your Workday needs. Our Phase X Deployment Services take a client-centric approach in delivering enterprise solutions. Whether it is a global Recruiting Deployment to a multi-national Payroll or Time Tracking implementation, Intecrowd's seasoned consultants combine industry experience with Workday best practices to execute your vision.

### Experienced Resources

You have selected a Workday partner for your implementation. Your project needs Workday fluent project managers, functional experts, and conversion or reporting resources to lead and drive the project to completion. Our client-side services offer Certified Workday consultants to navigate your project, leveraging the same methodology and tool kit as your deployment partner.

### Compliance – Data Scrambling

Intecrowd's Tenant Data Scrambling tools and services that project your PII by rapidly creating a large volume of scrambled data for use in non-production tenants to support testing, training, and development.
